8.3/8.4 Areas of Circles and Sectors Homework Geometry 3313

1. Sara, John, and Mike are calculating the area of a circle. 2 of the solutions are wrong and 1 is correct. Explain who is correct and why the other 2 are wrong.

John's solution
$A=\pi(8)^{2}$
$A=64 \pi \mathrm{~cm}^{2}$

Sara's solution
$A=\pi(4)^{2}$
$A=16 \pi \mathrm{~cm}^{2}$

Mike's solution
$A=2 \pi(4)$
$A=8 \pi \mathrm{~cm}^{2}$

Person who is correct: $\qquad$ Sara

Why are the other 2 wrong? Explain why each is wrong.
John used the diameter, not the radius mike used the circumference formula
2. Find the area of a circle whose radius is 9 inches long.
$A=\pi(9)^{2}$
$A=81 \pi$

$$
\begin{aligned}
&\text { Exact Area (in terms of } \pi)=\frac{81}{61} \text { in }^{3} \\
& \text { Approximate Area (rounded to nearest tenth) }=254.5 \text { in }^{2}
\end{aligned}
$$

3. Find the area of the circle below.

$$
\begin{aligned}
& A=\pi(11)^{2} \\
& A=121 \pi
\end{aligned}
$$

$$
\begin{aligned}
& \text { Exact Area (in terms of } \pi)=\frac{121 \pi i^{2}}{(\text { rounded to nearest tenth })=380 \cdot 1 i^{2}}
\end{aligned}
$$

4. The area of a circle is $256 \pi \mathrm{~cm}^{2}$. What is the circumference of this circle?

$$
\begin{aligned}
A & =\pi r^{2} \\
\frac{256 \pi}{r^{2}} & =\frac{\pi r^{2}}{r^{2}} \\
256 & =r^{2} \\
16 & =r
\end{aligned}
$$

$$
\begin{aligned}
& C=2 \pi(16) \\
& C=32 \pi \mathrm{~cm} \\
& O R \\
& C=100.5 \mathrm{~cm}
\end{aligned}
$$

5. The circumference of a circle is $256 \pi \mathrm{~cm}$. What is the area of this circle?

$$
\begin{array}{cc}
C=\partial \pi r \\
\frac{\partial 56 \pi}{\partial \pi}=\frac{\partial \pi r}{\partial \pi} \\
128=r & A=\pi(128)^{2} \\
A=16384 \pi \mathrm{~cm}^{2} \\
0 R \\
A=51471.9 \mathrm{~cm}^{2}
\end{array}
$$

6. Find the area of each of the sectors below.
a.

$$
\frac{30}{300} \cdot \pi(18)^{2}
$$

$\frac{1}{12} \pi(324)$
$27 \pi m^{2}$ or $84.8 m^{2}$
b.

$$
\frac{120}{360} \cdot \pi(6)^{2}
$$

$$
\frac{1}{3} \pi(36)
$$

$12 \pi$ in $^{2}$ or 37.7 in $^{2}$
7. A lawn sprinkler moves in a circular direction and rotates $80^{\circ}$ before it rotates back to its starting position. If the sprinkler projects water out 20 feet, how many square feet of lawn are being watered by the sprinkler? Round your answer to the nearest square foot.

$$
\frac{80}{360} \cdot \pi(20)^{2}=279.3 \mathrm{ft}^{2}
$$

8. A sector has a radius of 6 yd and an area of $9 \pi \mathrm{yd}^{2}$. Find the central angle of the sector.

$$
\begin{aligned}
& A=\frac{\text { central angle }}{360} \cdot \pi r^{2} \\
& \frac{\pi}{\pi 1}=\frac{x}{360} \cdot 25=\frac{x}{360} \cdot 360 \\
& \frac{36}{36}=\frac{x}{360} \cdot 36 \\
& 36
\end{aligned}
$$
